Insights & Interpretation Report

Opportunity Platform: Catalogue, Trends & Scholarship Analysis

1. Overview of the Dashboard

The dashboard analyses **1,125 opportunity listings** across **11 categories**, with an overall **median scholarship of 48**. It lets a viewer explore what kinds of opportunities exist, how much scholarship value they carry, where they are located and how listing activity has changed between 2022 and 2026

Link to the Dashboard: Opportunity Dashboard Visuals

Components

- **KPI cards:** Total Opportunities (1.125K), Median Scholarship (48), Opportunity Categories (11).
- **Slicers:** Category dropdown, Location checkboxes (Kolkata, Not Specified, Virtual, Work From Home) and a Created Year range slider (2022–2026).
- **Five visuals:**

Visual	What it answers
Opportunity Categories	What types of opportunities exist, and how many of each?
Median Scholarship by Opportunity Category	Which categories carry the most financial value?
Opportunity Count by Scholarship Amount	How are scholarship values distributed?
Opportunities by Listed Location	Where are opportunities based?
Opportunities Created by Year	How has listing activity changed over time?

2. Key Trends and Observations

Category	Count	Share
Internship	544	48.4%
Competition	121	10.8%
Event	118	10.5%
Course	111	9.9%
Engagement	71	6.3%
Career	69	6.1%
Masterclass	48	4.3%
JobSimulation	37	3.3%
Program, Unknown, Xploreu	2 each	0.5% combined

a) The catalogue is dominated by Internships

Internships alone make up nearly half the platform, and the top four categories together account for about 80% of all listings.

b) Scholarship value differs sharply by category

Competition, Course and Masterclass each have a median scholarship of **100**. Career follows at 68, then Event (41), Xploreu (26), Program (25), Engagement (24), Internship (17) and JobSimulation (10).

c) The platform is remote-first

Work From Home has 460 listings (40.9%), Virtual 365 (32.4%), Not Specified 299 (26.6%) and Kolkata just 1. Remote formats account for **73%** of listings.

d) Listing activity rose quickly, then settled

Listings went from 16 in 2022 to 363 in 2023, then 260 (2024), 318 (2025) and 166 (2026 so far). The 2026 figure covers a partial year.

e) The scholarship distribution is distorted by one outlier

1,121 records sit in the lowest scholarship bin and a single record sit in the 0.5bn bin. That one value stretches the axis and makes the histogram uninformative.

3. Important Insights Supported by Visual Evidence

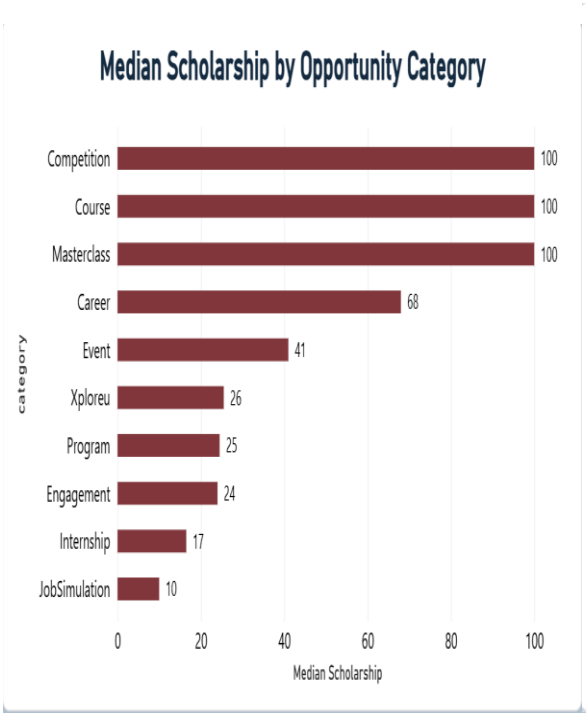

Insight 1: Scholarship value falls into three tiers, and most listings sit in the lowest one

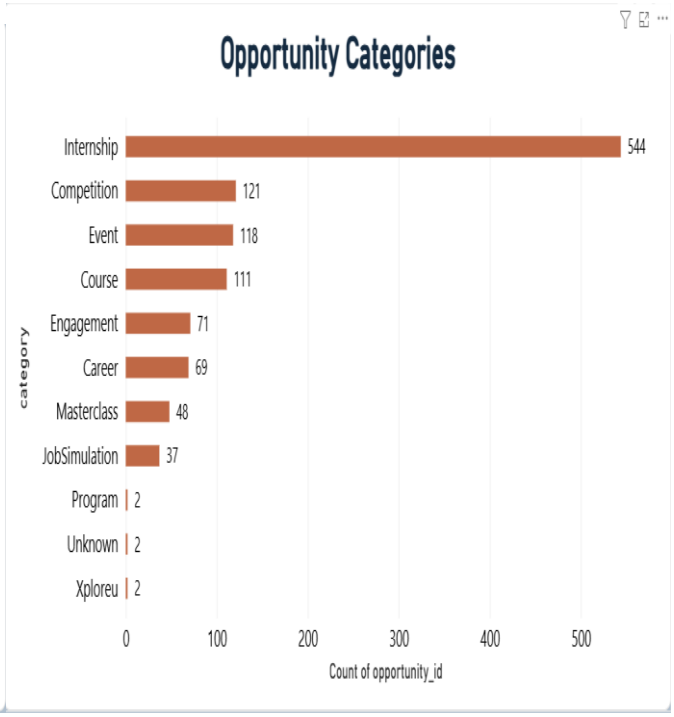

Evidence: Median Scholarship by Opportunity Category, with counts from Opportunity Categories.

Tier	Categories (median scholarship)	Listings	Share of platform
High	Competition (100), Course (100), Masterclass (100)	280	24.9%
Middle	Career (68), Event (41)	187	16.6%
Low	Xploreu (26), Program (25), Engagement (24), Internship (17), JobSimulation (10)	656	58.3%

The high tier has a median about 6 times that of Internship (100 vs 17) and 10 times that of JobSimulation (100 vs 10). More than half of all listings (58%) fall in the low tier, largely because Internships alone account for 544 listings.

Why it matters: a user browsing the platform is most likely to meet a low-scholarship opportunity. The high-value categories exist but make up only a quarter of the catalogue.

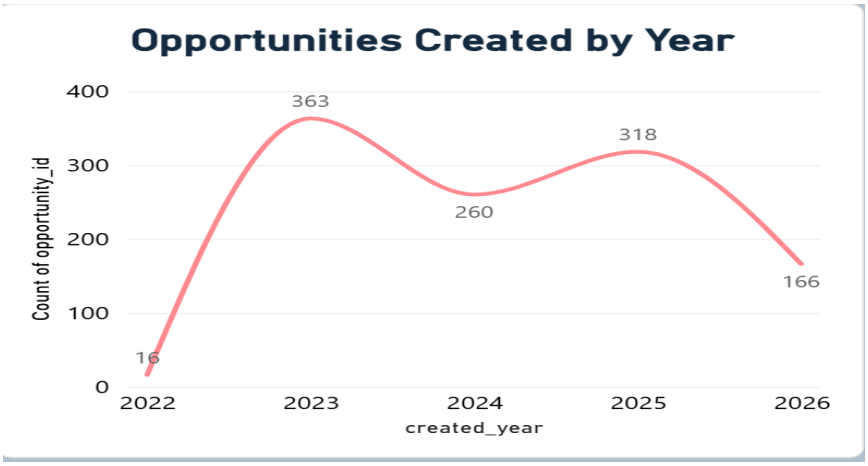

Insight 2: After a rapid launch, listing activity settled into a high, fairly stable range

Evidence: Opportunities Created by Year.

Listings jumped from 16 in 2022 to 363 in 2023, then moved within a band of 260 to 363 per year. The three full years from 2023 to 2025 account for **941 of 1,123 dated listings (about 84%)**, averaging roughly 314 a year. Activity rose again in 2025 (318, up about 22% from 260 in 2024), so the 2024 dip looks temporary rather than the start of a decline. The 2026 figure of 166 is a partial year and should not be read as a drop; it already equals about 52% of the 2025 total.

Why it matters: the platform has reached a steady operating level, which makes it reasonable to set yearly targets rather than treat 2023 as a one-off spike.

Insight 3: Remote delivery dominates

Evidence: Opportunities by Listed Location.

With 73% of listings remote and only one in Kolkata, the platform is built for access that does not depend on geography. Its reach is not tied to any one city.

Insight 4: Over a quarter of listings lack a clear location

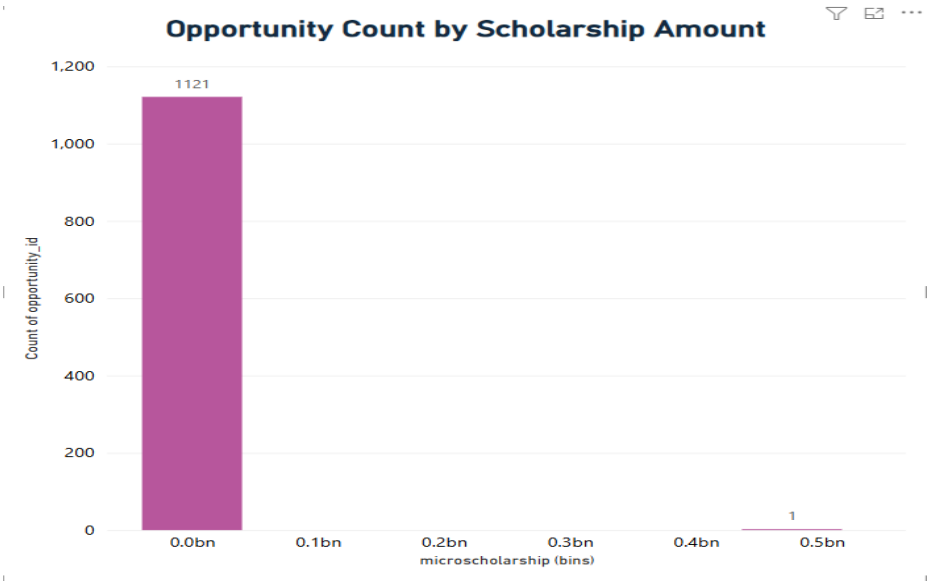

Evidence: Opportunities by Listed Location.

There are 299 "Not Specified" listings (26.6%). Many may be remote, but the data does not confirm it, so this limits any analysis of where opportunities are.

Insight 5: The scholarship field needs cleaning

Evidence: Opportunity Count by Scholarship Amount.

A single value near 500 million is almost certainly a data-entry error. It makes the histogram unreadable and would badly distort any average, which is why the median is the right measure for this dashboard.

4. Recommendations

1. **Clean the scholarship field.** Remove or correct the extreme value, then rebuild the histogram with sensible bins (e.g., 0–25, 26–50, 51–100, 100+) so the real distribution is visible.
2. **Reduce "Not Specified" locations** by making location a required field, and standardize "Virtual" and "Work From Home" if they mean the same thing.
3. **Rebalance the scholarship offering.** Raise financial support for Internships, or promote the high-value Competitions, Courses and Masterclasses more heavily, so value is not concentrated in a quarter of the catalogue.
4. **Set yearly listing targets.** Since activity has held between 260 and 363 listings a year, use that range as a baseline and revisit the 2026 numbers once the year is complete.
5. **Investigate the 2024 trough.** Identify what drove the dip (partnerships, campaigns, seasonality) and whether the 2023 and 2025 peaks can be sustained.
6. **Make the dashboard clearer.** Add data labels throughout and a "reset filters" button so viewers are not confused when a selection is active.

5. Summary of the Overall Analysis

The platform has 1,125 opportunities across 11 categories, led heavily by Internships (48%) and delivered mostly remotely (73%). Scholarship value falls into three tiers: Competitions, Courses and Masterclasses offer the highest median (100) but make up only about a quarter of listings, while more than half of listings sit in categories with a median of 26 or below. Listing activity grew quickly in 2023 and has stayed in a high, fairly stable range since. Two data-quality issues, one extreme scholarship value and a large "Not Specified" location group, limit how far some conclusions can go. Cleaning these fields and aligning the category mix with scholarship value would make the platform easier to measure and more valuable to users.

Note on Method

Counts and medians are read from the dashboard's data labels with no filters applied. The overall median scholarship (48) is calculated across all 1,125 records, so it does not need to match any single category's median. The median chart shows 10 categories while the category chart shows 11, so the 2 "Unknown" listings appear to have no scholarship value. Yearly counts sum to 1,123, so two records may have no creation year. Medians describe the typical listing in a category, not total funding.
